Plate 11. Antilopine Wallaroos are most often seen in habitat like this feeding in the early morning or late afternoons. A number of Antilopines can be found in this photograph. (Photo: A.J. Press)

Plate 12. Rocky slopes of the rockland of Arnhem Land and the outliers. Black Wallaroos and Common Wallaroos are locally sympatric on these slopes along with the Short-eared Rock-wallaby and occasionally the Nabarlek. (Photo: A.J. Press)
